Submitted (APR-1998) to the EMBL/GenBank/DDBJ databases.
-!- FUNCTION: DESTROYS RADICALS WHICH ARE NORMALLY PRODUCED WITHIN THE
CELLS AND WHICH ARE TOXIC TO BIOLOGICAL SYSTEMS (BY SIMILARITY).
-!- CATALYTIC ACTIVITY: 2 SUPEROXIDE + 2 H(+) = O(2) + H(2)O(2).
-!- SIMILARITY: BELONGS TO THE IRON/MANGANESE SUPEROXIDE DISMUTASE
FAMILY.

Am. J. Respir. Cell Mol. Biol. 4:278-286(1991).
-!- FUNCTION: Destroys radicals which are normally produced within the cells and which are toxic to biological systems.
-!- CATALYTIC ACTIVITY: 2 superoxide + 2 H(+) = O(2) + H(2)O(2).
-!- CORACTOR: Binds 1 manganese ion per subunit (By similarity).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    STRAIN=Sprague-Dawley; TISSUE=Liver;

manganous superoxide dismutase promoter.";
Am. J. Respir. Cell Mol. Biol. 10:113-121(1994).
-!- FUNCTION: Destroys radicals which are normally produced within the cells and which are toxic to biological systems.
-!- CAPALYTIC ACTIVITY: 2 superoxide + 2 H(+) = 0(2) + H(2)0(2).
-!- COPACTOR: Binds 1 manganese ion per subunit (By similarity).
-!- SUBCELLULAR LOCATION: Mitochondrial matrix.
-!- SIMILARITY: Belongs to the iron/manganese superoxide dismutase family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              1 MSVRASLSSVSRQTFVAPAAFQIRAKHTLPELPYAYDALEPSISKEIMTLHHTKHHQTYV

-!- FUNCTION: Destroys radicals which are normally produced within the cells and which are toxic to biological systems.
-!- CATALYTIC ACTIVITY: 2 superoxide + 2 H(+) = 0(2) + H(2)0(2).
-!- COFACTOR: Binds 1 manganese ion per subunit.
-!- SUBUNIT: Homotetramer.
-!- SUBURITY: Belongs to the iron/manganese superoxide dismutase
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      MEDLINE=20111275; PubMed=10852710; Leveque V.J.-P., Stroupe M.E., Lepock J.R., Cabelli D.E., Tainer J.A., Nick H.S., Silverman D.N.; "Multiple replacements of glutamine 143 in human manganese superoxide dismutase: Effects on structure, stability, and catalysis."; Blochemistry 39:7131-7137(2000).

Sci. 61:291-294(1999).

-! FUNCTION: Destroys radicals which are normally produced within the cells and which are toxic to biological systems.

-! CATALYTIC ACTIVITY: 2 superoxide + 2 H(+) = O(2) + H(2)O(2).

-! COPACTOR: Binds 1 manganese ion per subunit (By similarity).

-! SUBUNIT: Homotetramer (By similarity).

-! SUBCELLULAR LOCATION: Mitochondrial matrix.

-! SIMILARITY: Belongs to the iron/manganese superoxide dismutase
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   1 MSVRASLSSVSRQTFVAPAAFQIRAKHTLPELPYAYDALEPSISKEIMTLHHTKHHQTYV

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          09
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              -!- FUNCTION: Destroys radicals which are normally produced within the cells and which are toxic to biological systems.
-!- CATALYTIC ACTIVITY: 2 superoxide + 2 H(+) = 0(2) + H(2)0(2).
-!- COFACTOR: Binds 1 manganese ion per subunit (By similarity).
-!- SUBUNIT: Homoterramer (By similarity).
-!- SUBCELLULAR LOCATION: Mitochondrial matrix (By similarity).
-!- SIMILARITY: Belongs to the iron/manganese superoxide dismutase
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     KHTLPELPYAYDALEPSISKEIMTLHHTKHHQTYVNGLNAAEESYSAAVGKEDVLTQVKL

                                                                                                                                                                                                                                                                         -!- FUNCTION: Destroys radicals which are normally produced within the cells and which are toxic to biological systems.
-!- CATALYTIC ACTIVITY: 2 superoxide + 2 H(+) = O(2) + H(2)O(2).
-!- COFACTOR: Binds 1 manganese ion per subunit (By similarity).
-!- SUBUNIT: Homotetramer (By similarity).
-!- SUBCELLULAR LOCATION: Mitochondrial matrix (By similarity).
-!- SIMILARITY: Belongs to the iron/manganese superoxide dismutase
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           26 KHTLPELPYAYDALEPSISKEIMTLHHTKHHQTYVNGLNAAEESYSAAVGKEDVLTQVKL

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gene 296:99-109(2002).
-!-FUNCTION: Destroys radicals which are normally produced within to calls and which are toxic to biological systems.
-!-CATALTIC ACTIVITY: 2 superoxide + 2 H(+) = O(2) + H(2)O(2).
-!-COFACTOR: Binds 1 manganese ion per subunit (By similarity).
-!-SUBUNIT: Homocetzamer (By similarity).
-!-SUBCELDULAR LOCATION: Mitochondrial matrix (By similarity).
-!-SUBCELDULAR LOCATION: Mitochondrial matrix (By similarity).
-!-SIMILARITY: Belongs to the iron/manganese superoxide dismutase
                                                                                                                                                                                                                   Macaca mulatta (Rhesus macaque).

Gene 296:99-109(2002).

-!- FUNCTION: Destroys radicals which are normally produced within the cells and which are toxic to biological systems.

-!- CATALYTIC ACTIVITY: 2 superoxide + 2 H(+) = 0(2) + H(2)0(2).

-!- COPACTOR: Binds 1 manganese ion per subunit (By similarity).

-!- SUBUNIT: Homotetramer (By similarity) witochondarial matrix (By similarity).

-!- SUBURITY: Belongs to the iron/manganese superoxide dismutase

                                                                                                                                                                                                                                                                                       Gene 296:99-109(2002).
-!- FUNCTION: Destroys radicals which are normally produced within the cells and which are toxic to biological systems.
-!- CATALYTIC ACTIVITY: 2 superoxide + 2 H(+) = O(2) + H(2)O(2).
-!- CORCTOR: Binds I manganese ion per subunit (By similarity).
-!- SUBUNIT: Homotetramer (By similarity).
-!- SUBCELLUIAR LOCATION: Mitochondrial matrix (By similarity).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     26 KHTLPELPYAYDALEPSISKEIMTLHHTKHHQTYVNGLNAAEESYSAAVGKEDVLTQVKL

A; Description: catalyzes the dismutation of 2 molecules of peroxide radical to dioxygen a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       submitted to the EMBL Data Library, December 1994
A;Description: Rice manganese superoxide dismutase are encoded by multigene family.
A;Reference number: Z15187
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   C; Superfamily: superoxide dismutase (Mn)
C; Superfamily: superoxide dismutase (Mn)
C; Keywords: manganese; metalloprotein; mitochondrion; oxidoreductase
F; 1-27/Domain: transit peptide (mitochondrion) #status predicted <TND>
F; 28-231/Product: superoxide dismutase (Mn) #status predicted <MAT>
F; 55, 103, 192, 196/Binding site: manganese (His, His, Asp, His) #status predicted
